

# Storage Tips

Watermelon: A ripe watermelon will have a yellowish-white resting spot, opposed to a white or pale green spot (where the melon rested on the ground). If it is not yet ripe, give it a few days. Also, a soft “give” when you press the blossom end of the melon (opposite the stem end), indicated ripeness. Store watermelon in the refrigerator & once cut, be sure to wrap in plastic or foil & store in refrigerator.

Persimmons: Keep on the counter until ripe (when orange or deep orange red). Once ripe, keep in the fridge in an open plastic bag or in a bowl lightly covered with plastic wrap. Keep in the crisper drawer.

Carrots with greens – Remove the greens from the carrots & store them separately. Make sure the roots are dry & unwashed. Place them in a separate zip lock bags & store in the fridge (do not store with any part of greens attached as they will pull moisture from the root). Pat the greens dry with a paper towel. Wrap the greens in a paper towel & store in an airtight plastic contain (you can use a plastic bag too). Store in the refrigerator.

Cauliflower - Store, stem-side down in a plastic bag in the refrigerator (stem-side down prevents moisture from collecting in the florets & possibly causing the head to spoil).

Tomatoes - Do NOT refrigerate. Keep them at room temperature on the counter away from direct sunlight.

Zucchini - wrap cucumbers individually in a paper towels & then place in a plastic bag & store in the crisper drawer of the refrigerator.

Cabbage: Store the cabbage head whole in your crisper drawer until you use it. Do not wash it. Leave the outer leaves on as they protect the more delicate inner leaves (discard the outer leaves before you use it). If you do not use the entire cabbage at one time, after you cut it, wrap the remaining cabbage in plastic wrap & return to the fridge. If stored well, cabbage can last for weeks in your fridge.
